To Whom It May Concern:

Re: Supply of WatchMan500™ Nodes for GPRS Coastal Mesonet

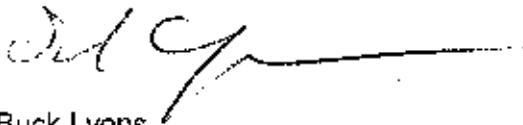

This letter is to confirm that since 2006, AXYS Technologies Inc. has supplied WeatherFlow with WatchMan500 controller/datalogger nodes that are integrated with GPRS telemetry for a large-scale coastal weather observing network.

To date, AXYS has supplied more than 100 WatchMan500 nodes as the controller and core data acquisition, processing and transmission technology for weather stations used for the WeatherFlow Coastal Mesonet on the United States Eastern Seaboard.

WeatherFlow attests that AXYS Technologies Inc. has provided on time, on price delivery of systems with good customer support. Their datalogger continues to perform in the field and we currently operate 101 weather stations utilizing the WatchMan 500.

Let us know if you would like to view data from the WeatherFlow Coastal Mesonet by requesting a free trial at <http://datascope.weatherflow.com/>.

Sincerely,

Buck Lyons
CEO
WeatherFlow Inc.
